

Wellspring's \$3 million equipment expansion is just the beginning

Recently, we invested more than \$3 million in updating, expanding and improving our equipment line.

We now have directly scalable capabilities in smaller development-scale equipment; expanded manufacturing for specialized dosage forms such as bilayer tablets; and improved support for high-potency compound manufacturing.

In addition, we've acquired new expertise in process development and manufacturing for early phase clinical trials, which will enable future expansion of our large-scale manufacturing capabilities.

Capital investments include:

- Alexanderwerk Roller Compactor
- IMA Precisa Capsule Weight Checker
- 400 kg O'Hara Tray Drying Oven
- Korsch XL 400 Tablet Press With Bilayer Module
- Glatt GPCG 2/5 Fluid Bed Processor
- O'Hara Aqueous Film Coater With 18" and 30" Interchangeable Pans
- 5L Becomix Counter Sweep Vessel
